Veterinary Health Center:
Graduate and undergraduate students receive their clinical classes in internal medicine, surgery, theriogenology, morbid anatomy and poultry diseases at this center.

Mobile Clinic
The mobile clinic is a modern fully equipped ambulance designed to provide veterinary services for animal herds, treatment of emergency cases, samples collection for diagnostic purposes, large-scale vaccination programs, surgical operations and artificial insemination.

Artificial Insemination and Embryo transfer Unit
The objective of this unit is to supply the local farmers with frozen semen from genetically superior sires of different domesticated species. The unit offers intensive and advanced training courses in artificial insemination and embryo transfer technology, and modern reproductive biotechnologies for practicing veterinarians in private and public sectors.

Anatomy Museum
The museum consists of a preparation room (embalming), storage room, a classroom and a hall for embalmed and fixed specimens, skeletons and whole carcasses of different domestic animals (camel, horse, cow, sheep, goat, dog, pig, poultry). The museum contains disarticulated skeletons of all domestic animals and human for comparative purposes, in addition to complete articulated skeletons of a horse and a sheep.
