

## Number of innovative program(s)

### Description:

During most of the COVID-19 pandemic in 2020-2021, students were not allowed to be on campus. This meant that some highly qualified JUST staff members (such as those responsible for labs, students practical training, etc.) were left with rather light work load. CEIP started soliciting ideas from such people (as well as from the local community) and helped them execute their projects using its fab lab and JUST's large and diversified workshops. Examples of such projects include:

1. On-Campus fast and safe EV charger

2. Solar-powered golf cart for mail/package delivery within JUST's vast campus

3. A charging station powered by solar panels as well as pedaling
