

My Erasmus Experience

My name is Jana Nabulsi, and I am currently studying industrial engineering at Jordan university of science and technology.

I had the opportunity to participate in an Erasmus exchange program in Finland for four months during the previous semester.

It was the best four month in my entire life I got to know people, make friends, and experience a lot of new things. Finland is a wonderfully peaceful place, and the Finns are quite friendly and welcoming.

Through this experience I learned more about my personality and capabilities, it was a great way to get outside of my comfort zone and explore a different place, country, way of life, and culture. Also, discovering new approaches of learning was extremely interesting.

Without the presence of the ESN team and the international relations office in JUST, our experience would not have been as great. They stayed in constant contact with us to address all our requirements and misunderstandings.

Never hesitate to take advantage of any Erasmus opportunity. Explore the foreign country and establish friends who will later become your second family.
