

## **Terlipressin**

### **Usual Diluents**

Incompatible with dextrose solutions. Compatibility has not been studied; avoid Y-site administration and admixture with other drugs.

### **Reconstitution**

Reconstitute each vial with 5 mL of sterile 0.9% sodium chloride injection prior to administration to prepare a 1 mg/5mL terlipressin solution. Do not use dextrose solutions to reconstitute the vial. Administer Terlipressin as a slow IV bolus. Flush the line with saline prior to and after the Terlipressin

bolus injection.

### **Administration**

Administer only as an intravenous injection over ~1 minute.

### **Stability / Miscellaneous**

- Powder for injection:

Glypressin, Haemopressin, Variquel: Prior to reconstitution, store below 25°C (77°F). Protect from light. Use immediately after reconstitution.

Lucassin: Prior to reconstitution, store at 2°C to 8°C (36°F to 46°F). After reconstitution, may store at 2°C to 8°C (36°F to 46°F) for ≤24 hours prior to use. Do not freeze.

- Premixed solution (manufacturer premixed): Store ampuls in refrigerator between 2°C (36°F) and 8°C (46°F) in original package. Protect from light.
