

Vecuronium

Usual Diluents

D5W, NS, LR, SWI, BWFI.

Reconstitution

Reconstitute with compatible solution for injection to final concentration of 1 mg/mL. May further dilute reconstituted vial to 0.1-0.2 mg/mL in a compatible solution for I.V. infusion.

Standard Dilutions [Amount of drug] [Infusion volume] [Infusion rate]

Continuous infusion:

Manufacturer:

[10 mg] [100 ml] [Titrate]

[20 mg] [100 ml] [Titrate]

Alternative (less support):

50 mg/ 50 ml (Undiluted-viaflex)

Concentration: 1 mg/ml

(Dilute each 10mg vial with
10 ml sterile water)

Stability / Miscellaneous

Store intact vials of powder for injection at room temperature 15°C to 30°C (59°F to 86°F).

Vials reconstituted with bacteriostatic water for injection (BWFI) may be stored for 5 days under refrigeration or at room temperature.

Vials reconstituted with other compatible diluents (nonbacteriostatic) should be stored under refrigeration and used within 24 hours.
